SAP Fiori UX Design and Build Challenge

Making a Case

A CFO of a multinational company making business in different business segments is not interested in generating data, but rather to consume data that has been generated by the team working with him/her in his/her company. Therefore the reporting experience for a CFO is of utmost importance.

In order to feed the CFO of a multinational company with information for assisting him/her in his/her decision making, planning and risk management activities an app displaying graphically the most important financial KIPs (key performance indicators) would be of great importance. The comparison between different financial years, the information about the financial closing activities status and the possibility of contacting the responsible for the reporting would also be of great help. As the CFO is managing a multinational company making business in different business segments the possibility of filtering the data according to his/her needs is as well very important.
