

SAP Fiori UX Design and Build Challenge

1. User story

Will Harrison is the security chief in an important company in the automotive industry. The company's CEO and member of the board are frequently traveling to several places and countries for meetings and closing deals, and Will is the responsible for approving the security team for the given travel, or reproving it if security cannot be guaranteed.

When a board member has a new travel planning, the security team defines a team to escort him. The security team then releases this team proposal to Will, who is responsible to confirm whether the given team matches the travel needs. To do so, he analyses the risks of the destination and compare them with the team members' experience, approving or reproving the travel and being responsible if anything goes wrong.

The process of approving a team for a travel and approving the travel itself has to be perfect, since the security of the company's board members cannot be affected. The whole process is manual and lots of information tends to get lost, therefore a way to track all this data is a must for the security team.

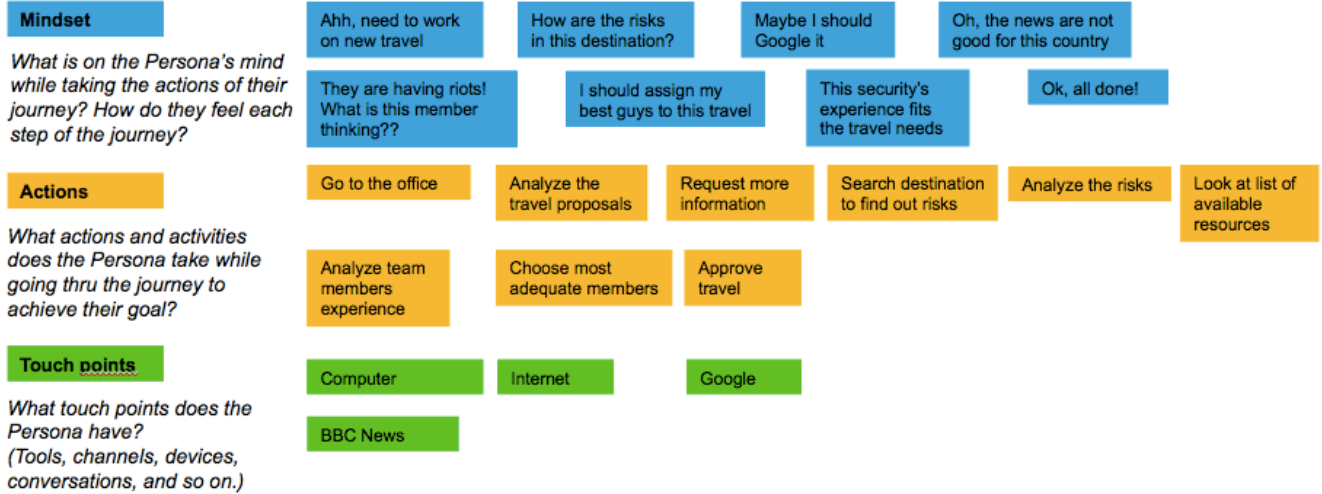

3. User Experience Journey

SAP Fiori UX Design and Build Challenge

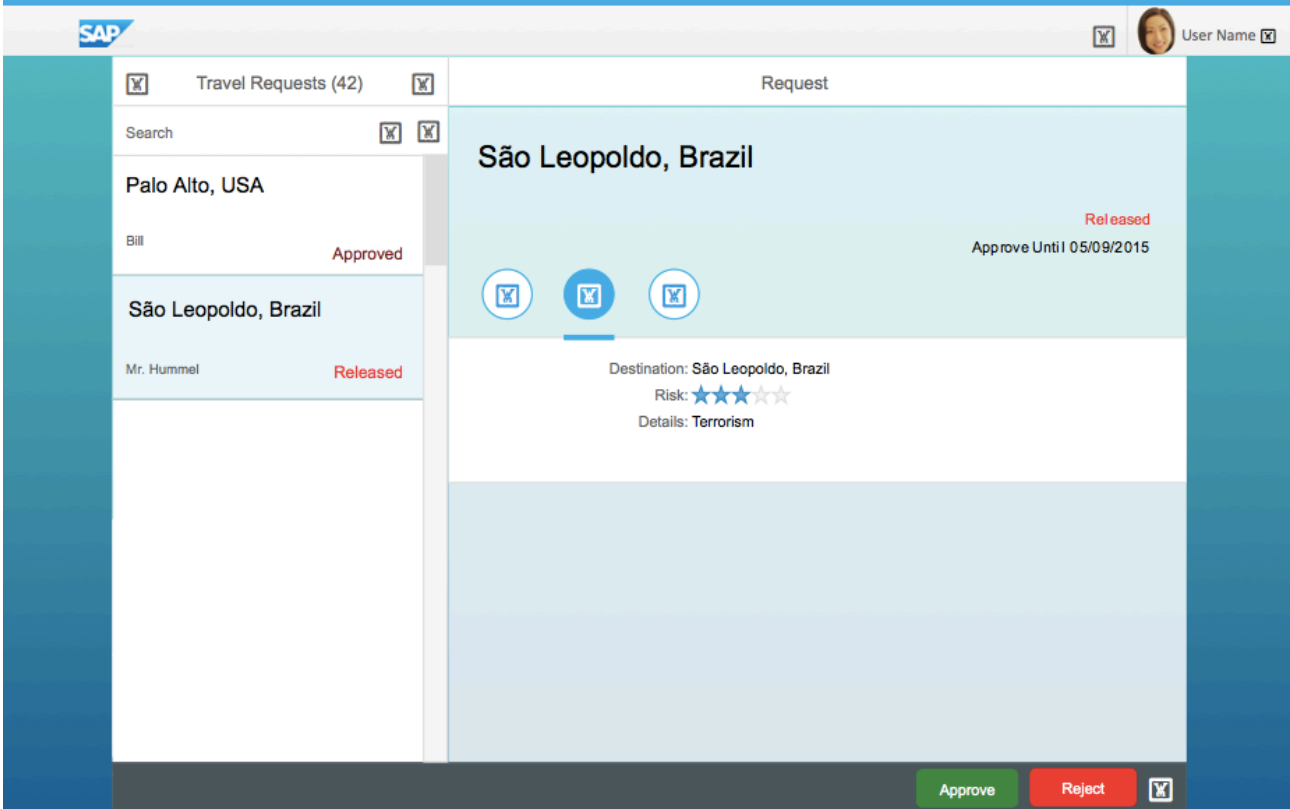

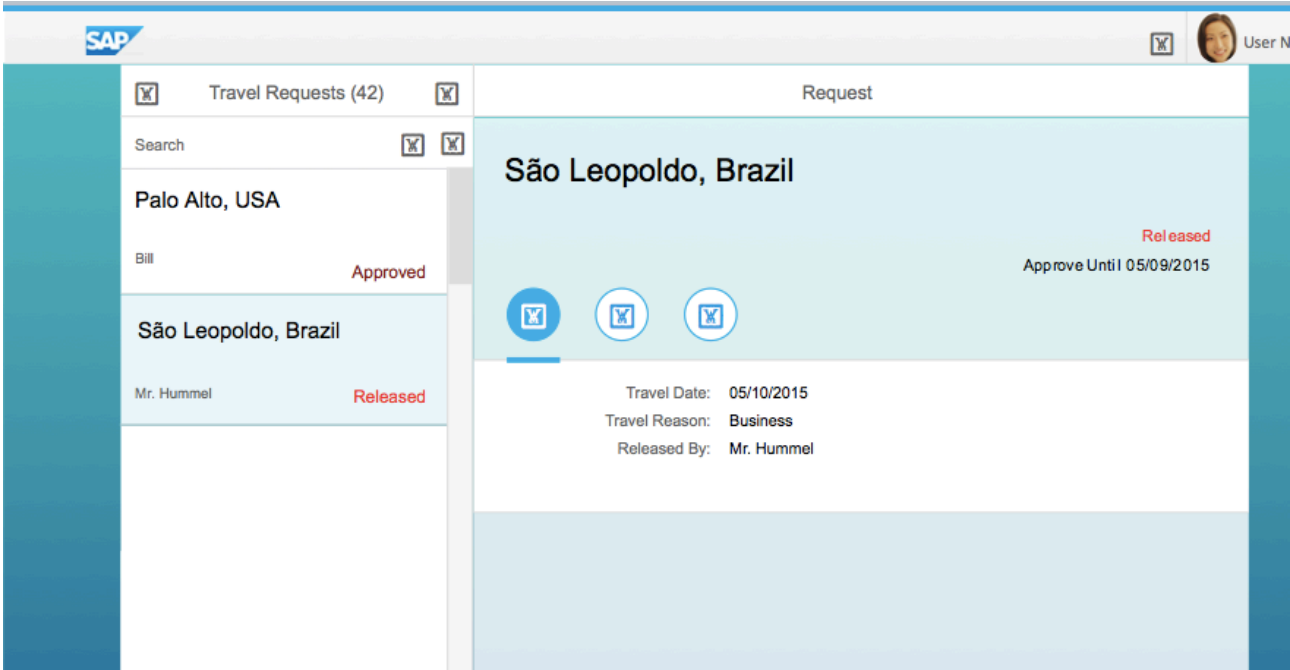

User Experience Journey

Current User Experience Journey

Duration of the Journey: 8h

4. Mock Up

SAP User Name

Travel Requests (42) Request

Search

Palo Alto, USA	Approved
São Leopoldo, Brazil	Released
