Around the world, many concerts and festivals are taking place this summer. The organizers are doing their best to make a great festival and tries to make as little expenses as possible. So many of the peoples, that are working there, are volunteers. These volunteers are often used as messengers between the bars and headquarter. Therefore, a lot of their time are wasted on transport.

With this prototype the headquarter, can see the actual stock level of items used on the festival. Furthermore they are able to see, if some of the items are out of order, meaning they can react fast and make the guests more happy.
PERSONA

Bob
Volunteer Team Lead

“I like when thing are done, without any waste time”

About
• 35, single, love music
• Often team lead for the volunteers
• Always in transport
• I work with the Organizers

Responsibilities
• Team lead for volunteers
• Spends a lot of my time on coordinating supplies to bars

Main Goals
• Being the person that helps the festival with greater results
• Being a great team lead

Needs
• I always need an overview of the current stock levels
• I need a way to see, if anything is running fine
• In case of an error I need to see, how to contact.

Pain Points
• The actual stock level can change, before I get the numbers
• Need to react, before errors occurs
POINT OF VIEW

As a volunteer team lead

I need a way to get an overview of possible future errors/needs

so that the festival participants can have a great festival
