

waiterAPP

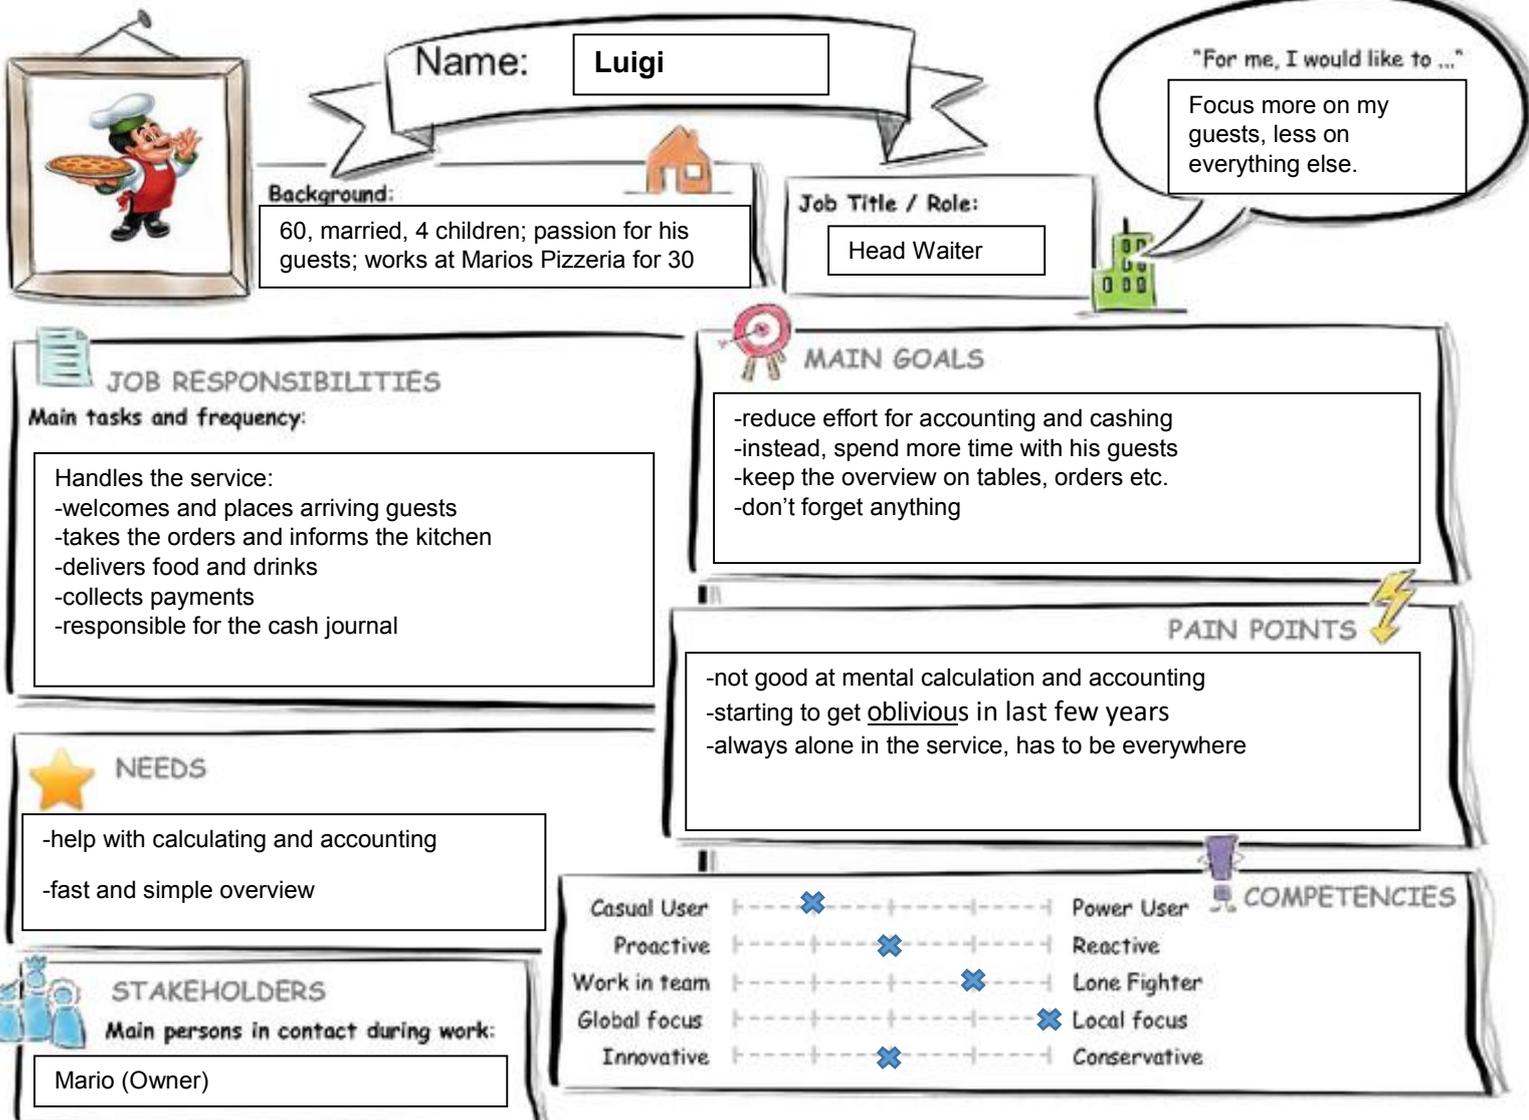

1. Story

This app is for food & beverage industry and gastronomy.

It aims especially at restaurants, bars, pubs and all kind of gastronomic businesses deploying waiters to serve their customers and want improve the quality and efficiency of their service.

The waiterAPP saves time and effort: Waiters can overlook at a glance which tables are free, which are occupied, what food and drinks have been ordered for a table and what is the open invoice amount so far. Once an order is recorded in the app, the dishes are automatically requested in the kitchen. When all dishes of the order are ready, the waiter will see it on the screen and can collect the food. When a table is paid and closed, invoice data is transfered to the accounting.

2. Persona

3. User Experience Journey

Duration: 75 Minutes

Mindset	Actions	Touchpoints	PP	IP
Let's see what I can do for you	Welcome Guests	Guests		
Everything's full in the front, hope I still have a table in the back room	Search empty table	Front room, back room	X	
Ah, lucky me, there's still one in the corner	Find Table and place guests	Table		X
Hm...what was the offer of the day again?	Bring menu	Menu card		
Which whine is best for the Vitello Tonnato?	Take the Orders and recommend a fitting whine	Pencil and note pad		X
My knee hurts again, today, also thin walking around all the time ☹	Bring the Orders to the kitchen	Kitchen	X	
Oh, like the smell of this new pino grigio, my guests will definitely like it	Make drinks and bring them to the guests	Bar		X
Oh no, I forgot a starter! ☹	Bring ordered dishes to the table	Dishes	X	X
I'm getting to old for this...	Take care that the guest gets his starter	Kitchen		
I love when my guests liked their meals ☺	Clear the table			
3,30 + 13,30 + 8,50 + ... 3 in mind ... I need a pocket calculator	Cash up the guests	Bill	X	X
I feel like a bookkeeper sometimes	Update the cash book	Register, cash book	X	

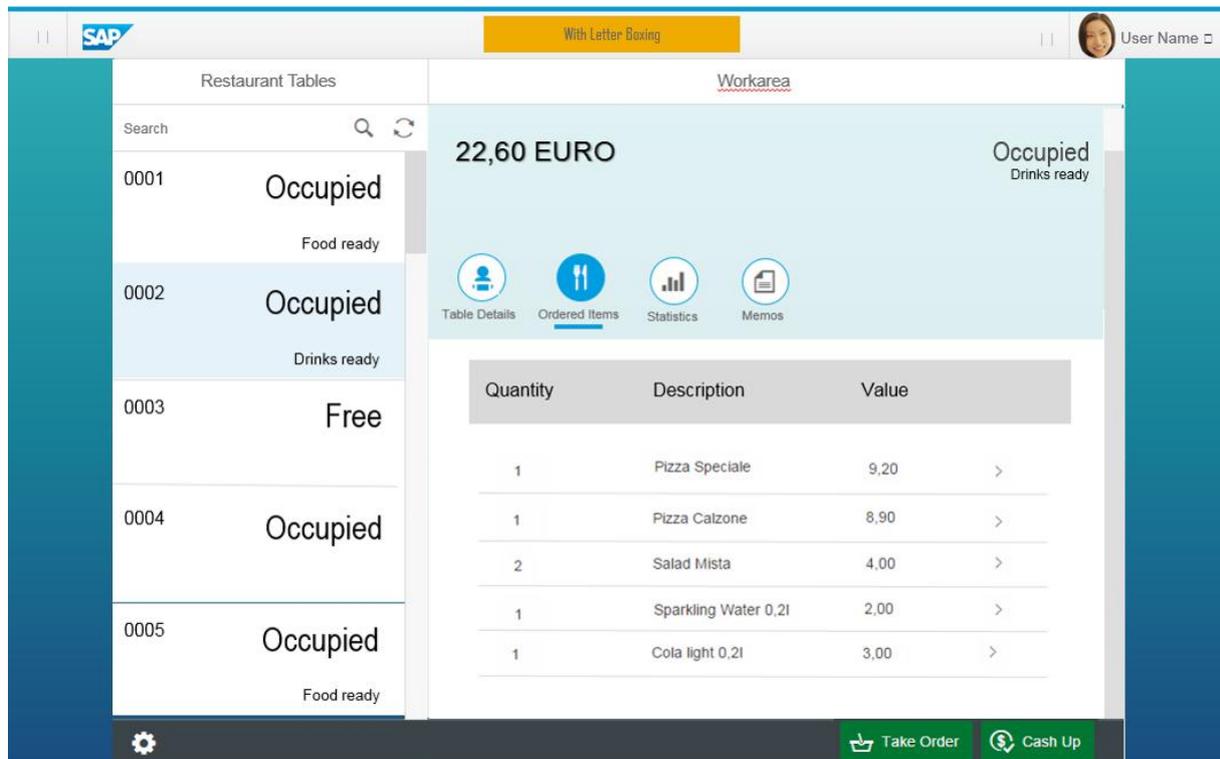

*PP = Pain Points

*IP = Important Points

4. Mock Up

Idea:

There will be apps for kitchen (and bar if needed) and for the waiters. The App for the waiters will look like this:

Explanation:

Master View

Here you can see every table of the restaurant. The waiter can see which ones are free or occupied. If there is any alert for this table (like Food ready) you can see it here

Detail View

-Header: You see again status and alert, as well as the current invoice amount (sum of all orders)

-Tab Table Details: Relevant information on the selected table

-Tab Ordered Items: List of all items that guests have been ordered at this table

-Tab Statistics: Personal sales statistics for the registered waiter

-Memos: Place where important information for all users can be displayed

Buttons

-Take Order: Opens View where waiter puts the orders of his guests in the App; if an Order is placed on a table with status "Free", the status will automatically change to "Occupied"; order information is automatically transferred to the kitchen/bar (will have own app); if food/drinks are ready kitchen/bar will notify that on their app and a corresponding alert will appear in the WaiterAPP

-Cash Up: When guests pay, the waiter will push this button and select the payment instrument the guests used in the following view; billing data is automatically transferred to accounting; status of table will change to "free"

5. SAP Web IDE App

The screenshot displays the SAP Web IDE interface. The top menu includes File, Edit, Run, Search, View, Tools, and Help. The left sidebar shows a file explorer with a project structure including folders like 'Local', 'css', 'model', and 'view', and files like 'App.controller.js', 'App.view.xml', 'Detail.controller.js', 'Detail.view.xml', 'Master.controller.js', 'Master.view.xml', 'NotFound.controller.js', 'NotFound.view.xml', 'project.json', 'user.project.json', 'Component.js', 'index.html', 'localIndex.html', 'MyRouter.js', and 'neo-app.json'. The main editor area shows the 'metadata.xml' file with the following XML content:

```
<?xml version="1.0" encoding="utf-8" standalone="no" ?>
<Schema Namespace="RestaurantData" xmlns:edmx="http://schemas.microsoft.com/ado/2008/09/edm" xmlns="http://schemas.microsoft.com/ado/2008/09/edm">
